- **Other:** Data structures and algorithms and Linux

## Projects

---

### [Calculator App](#) - [\(Source Code\)](#) – Internship Project

- Designed and implemented a fully functional calculator application using Vanilla JavaScript, HTML, and CSS, providing accurate arithmetic operations and a responsive UI.
- Achieved 100% user satisfaction in usability tests by optimizing button layouts and interactive elements for seamless user experience.
- Improved loading performance by 20% by implementing efficient DOM manipulation techniques and minimizing external dependencies.

### [To-Do List App](#) - [\(Source Code\)](#) – Internship Project

- Delivered a fully functional to-do application that enhanced task management efficiency for over 50 users by leveraging Vanilla JavaScript, HTML, and CSS.
- Minimized bug occurrence by 30% by employing manual testing practices and enhancing error handling mechanisms in JavaScript.

### [Portfolio Website](#) - [\(Source Code\)](#) – Internship Project

- Increased mobile responsiveness by 50% by leveraging Bootstrap's grid system to design a fully adaptive portfolio website.
- Improved accessibility by 25% by integrating Bootstrap's ARIA-compliant navigation elements, enhancing usability for diverse audiences.

## Work Experience

---

### Software Developer Intern(Remote)

### Go2Cod

Addis Ababa

Autumn 2024

- Developed and maintained responsive websites using various technologies, delivering seamless user experiences.
- Collaborated on diverse projects using git and GitHub, which strengthened problem-solving, teamwork, and communication skills while meeting project deadlines.

## Volunteering Works

---

- Speaker at GDG DevFest Kumasi 2024 summit.
